

Addoz Portal

- medication follow-up

All information about the medication, using the Med-O-Wheel Smart with the GSM module, is gathered in a separate Addoz Portal. Through the Internet, the online Portal allows the monitoring and analysis of the medication use at certain intervals.

This information can be used later in planning patient care. Doctors obtain accurate information on the medication use and are able to make more exact diagnoses based on this information. This reduces unnecessary tests and examinations as the system indicates the exact level of medicine taking.

The patient's commitment to the treatment is contributed by the possibility to activate reminder calls regarding medication administration directly to the patient and alerts, for example, to the service centre, nurse or relative.

Features and benefits

Real-time monitoring of medication history on the Internet

→ *provides professional carers with the correct information on the patient's medication use*

Communicates the percentage of medication use with precision

→ *provides additional information to the professional carers when determining treatment measures for the patient*

Allows reminder calls to the Med-O-Wheel Smart user

→ *ensures on-time medication administration*

Allows remote alerts to the desired address

→ *brings additional safety to on-time medication administration*

Addoz Portal

- works together with a GSM-enabled Med-O-Wheel Smart
- a tool for real-time medication monitoring via Internet
- allows reminder calls to the Med-O-Wheel Smart user
- allows remote alerts to the desired address
- clear and easy user interface for the management of messages and reports
- informs the percentage of medication use with precision, on a daily basis and on a desired period of time
- informs the amount of doses taken and forgotten, on a daily basis and on a desired period of time
- secure connection (SSL encryption)
- enables monitoring of an error-free operation of the Med-O-Wheel Smart via Internet
