User groups

Clinically tested, Med-O-Wheel Secure™ gives the right medication at the right time and, because of its locking feature, is suitable for demanding professional use by rehabilitation and mental health care professionals. Med-O-Wheel Secure also enables safe and regular home medication for patients.

Addoz Med-O-Wheel Secure

- Clinically tested
- Designed for professional use
- Lockable
- Portable
- Releases medication only at the right time
- Enables long-term home medication and makes it regular
- Single pills or pharmaceutical doses can be dosed for 1–28 days at a time
- One day can be programmed for 1–4 doses, and there is a three-hour window for each dose

For example, a patient in opioid replacement treatment has been prescribed Suboxone® to be taken each morning at 9am.

- Med-O-Wheel is set to give the medication at 9 a.m.
- The medication can be taken from the wheel between 8 a.m. and 11 a.m.
- Once the medication has been taken, Med-O-Wheel locks shut until it is time for the next morning's medication.
- The empty slot from which the medication was taken is no longer visible to the patient.
